TIP of the YEAR!

How to read our NEW RG3 Radio Read Meters

Step 1 – Locate your meter box

Step 2- Remove the box lid

Step 3- View all the different digital screens on your meter: Usage, Time, Factory settings, & Unit number. These screens will change back and forth

Step 4- The Leak indicator is in the bottom right corner, it should display 0.0 when no water is being used. This is the flow rate moving through the meter per minute

Step 5- Search your home and property for the source of a leak if indicator showed a flow rate above 0.0

Help be our Eyes!

... If you see a leak or water standing where it shouldn't, give us a call 1-601-733-2363. Our staff works diligently to keep leaks repaired!

Coming Soon....

Construction has started on our NEW well site on Pine Grove Rd. It will include a 600 Ft well pumping approximately 500 gallons per minute, an elevated tank, a water treatment plant, and a generator. This will be our second water tower in the Magee service area.

We have been working hard to upgrade our water system. We have started installing new RG3 Radio read meters in some areas. We have completed installation on over 2,700 meters.
